NARRATIVE

CATEGORY III: Non-compliant item(s) identified this inspection:

Section - 3.14(e)(1) - Space & Placement - Each dog must be allowed enough space to make normal postural adjustments. During the inspection today a poodle x & a malteapoo were in a transport crate that measured 17" x 10" x 12". These two 8 week old puppies could not fit comfortably within this crate. This was also the case for 2, 8 week old poodle pups that were shipped in the same size crate.

To be corrected by: Within 10 days of receipt of this report OR before the next shipment - which ever is sooner.

Section - 3.17(c) - Care in Transit - Any animal that is obviously ill must not be shipped. The malteapoo (pup # 48377) had an ocular green discharge in the left eye. This eye was closed and the animal was lethargic.

To be corrected by: Within 10 days of receipt of this report OR before the next shipment - which ever is sooner.

Section - 2.78 - Health Certification and Identification - No dealer shall deliver to any carrier a dog unless the animals is accompanied by a health certificate. This health certificate would be issued by the attending veterinarian who inspected the dog and it appeared to be free of any infectious diseases which may endanger the health of the animal and any others in the shipment. Again the malteapoo pup mentioned above had an ocular green discharge in the left eye and was lethargic. However, a health certificate was signed and dated 3/6/01.

To be corrected by: Within 10 days of receipt of this report OR before the next shipment - which ever is sooner.

Note:
12 transport crates & 24 pups were inspected
